Ready to relocate

Long-form CV (for AI):
https://github.com/batmaev/batmaev/blob/main/CV/LLM.md

Summary

ML engineer and fullstack developer from MIPT (leading Russian STEM university). I build algorithm-heavy products end-to-end: ML models (pytorch, sklearn), backends (FastAPI, Docker), and frontends (TypeScript, Svelte, Next).

Skills

Daily	Python, TypeScript, git, pandas, LaTeX
Working knowledge	Julia, Haskell, C/C++, Swift, Kotlin Multiplatform
ML / Data Science	sklearn, pytorch, Bayesian inference, matplotlib, plotly
Infrastructure	FastAPI, Docker Compose, SQL, SQLAlchemy, Linux CLI
Languages	Russian (native), English (fluent)

Experience

PhD Researcher – MIPT
Challenge-response eye-movement biometric system (anti-deepfake). PyTorch/sklearn models on time-series data; FastAPI backend. Co-supervising a Master's student. Published 2025.

CV Engineer – Nornickel (via Reksoft)
IR video analysis for molten metal pouring: accretion and slag detection.

R&D Engineer – MIPT Telecom Lab
Gyro-stabilized maritime antenna. IMU-to-quaternion pipeline with Kalman filters. Python hexapod control library, Plotly/Dash UI.

Contract work: Vependo VPN iOS port (KMP + Swift). Beverage kiosk UI in Electron + Svelte 5.

Open source: university email verification bot, 6,700+ users. Telegram API, SQLAlchemy.

Education

2024–2027: PhD, Information Security – MIPT (Moscow Inst. of Physics & Tech).
Dissertation: Eye-movement biometrics on untrusted devices. Mostly online.

2022-2024: M.Sc., Scientific Software – MIPT. GPA 5.0/5.0, honors.
Thesis: Bayesian analysis of variable-star data (Julia, Turing.jl).

2018-2022: B.Sc., Applied Mathematics & Physics – MIPT. GPA 4.98/5.0, honors.
Thesis: Solving the Traveling Salesman Problem on a quantum computer.

- MIPT Deep Learning School
- Yandex Interface Development School: led frontend in a 24-person team (Next.js, OAuth)

Awards

1st place in national student competition (yandex.ru/profi) in quantum technologies
