Ready to relocate

Long-form CV (for AI):

<https://github.com/batmaev/batmaev/blob/main/CV/LLM.md>

Summary

ML engineer and fullstack developer from MIPT (leading Russian STEM university). I build algorithm-heavy products end-to-end: ML models (pytorch, sklearn), backends (FastAPI, Docker), and frontends (TypeScript, Svelte, Next).

Skills

Daily	Python, TypeScript, git, pandas, LaTeX
Working knowledge	Julia, Wolfram Mathematica, MATLAB, C/C++, Swift, Kotlin
ML / Data Science	sklearn, pytorch, Bayesian inference, matplotlib, plotly
Infrastructure	FastAPI, Docker Compose, SQL, SQLAlchemy, Linux CLI
Languages	Russian (native), English (fluent)

Experience

PhD Researcher – MIPT

Challenge-response eye-movement biometric system (anti-deepfake). PyTorch/sklearn models on time-series data; FastAPI backend. Co-supervising a Master's student. Published 2025.

CV Engineer – Nornickel (via Reksoft)

Defect detection in molten metal from thermal video. Parallel pipeline in Python, OpenCV.

R&D Engineer – MIPT Telecom Lab

Gyro-stabilized maritime antenna. Sensors-to-quaternion pipeline with Kalman filters. Python hexapod control library, Plotly/Dash UI.

Contract work: Vependo VPN iOS port (KMP + Swift). Beverage kiosk UI in Electron + Svelte 5.

Open source: contributed to telemt (proxy) and tuwunel (decentralized chat server).

Built a university email verification bot for Telegram (6,800 users, 23 GitHub stars).

Education

2024-2027: PhD, Information Security – MIPT (Moscow Inst. of Physics & Tech).

Dissertation: Eye-movement biometrics on untrusted devices. Mostly online.

2022-2024: M.Sc., Scientific Software – MIPT. GPA 5.0/5.0, honors.

Thesis: Bayesian analysis of variable-star data (Julia, Turing.jl).

2018-2022: B.Sc., Applied Mathematics & Physics – MIPT. GPA 4.98/5.0, honors.

Thesis: Solving the Traveling Salesman Problem on a quantum computer.

– MIPT Deep Learning School

– Yandex Interface Development School: led frontend in a 24-person team (Next.js, OAuth)

Awards

1st place in national student competition (yandex.ru/profi) in quantum technologies

Publications

Defense against deepfake attacks via eye-movement liveness detection – Batmaev, Novikov // Information Security Issues, 2025

Dynamic eye-movement biometrics: trust with untrusted devices – Batmaev // MIPT Scientific Conference, 2025

Bayesian parameter estimation of symbiotic variable stars from light curves via probabilistic programming – Batmaev // MIPT Scientific Conference, 2024

Forest segmentation from satellite imagery via neural nets and mutual-information maximization – Matseyko, Batmaev et al. // IKI RAS Conference on Remote Sensing, 2023
