Ready to relocate

Long-form CV (for AI):

<https://github.com/batmaev/batmaev/blob/main/CV/LLM.md>

Summary

ML engineer and fullstack developer from MIPT (leading Russian STEM university).
I build algorithm-heavy products end-to-end: from ML models to production UIs.

Skills

Languages	Python, TypeScript, Julia; also: Rust, Haskell, C/C++, Swift
Scientific / ML	sklearn, pytorch, scipy, pandas, seaborn, plotly, Wolfram, Cirq, OpenCV
Backend	FastAPI, SQL, SurrealDB, SQLAlchemy, Linux CLI, Docker Compose
Frontend	Svelte, Next, Electron
Spoken	Russian (native), English (fluent)

Experience

2024-now: PhD Researcher – MIPT

Challenge-response eye-movement biometric system (anti-deepfake). Developing pytorch/sklearn models on time-series data; FastAPI backend. Co-supervising a Master's student. Published 2025.

2026: ML Engineer – Nornickel project

Detected accretions in molten metal from thermal video. Concurrent pipeline in Python, OpenCV.

2023: R&D Engineer – MIPT Telecom Lab

Gyro-stabilized maritime antenna. Wrote sensors-to-quaternion pipeline with Kalman filters. Built Python hexapod control library with Plotly/Dash UI. Debugged C firmware.

2024-2025: Contract work. Ported Vependo VPN to iOS (KMP + Swift).

Shipped a beverage kiosk UI in Electron + Svelte 5.

Open source: contributed to telemt (proxy) and tuwunel (decentralized chat server).

Built a university email verification bot for Telegram (6,800 users, 23 GitHub stars).

Education

2024-2027: PhD, Information Security – MIPT.

Dissertation: Eye-movement biometrics on untrusted devices. Relocation-compatible.

2022-2024: M.Sc., Scientific Software – MIPT. GPA 5.0/5.0, honors.

Thesis: Bayesian analysis of variable-star data (Julia, Turing.jl).

2018-2022: B.Sc., Applied Mathematics & Physics – MIPT. GPA 4.98/5.0, honors.

Quantum computing track: cryptography, superconducting systems, qubit implementations.
Thesis: Solving the Traveling Salesman Problem on a quantum computer (Cirq).

– MIPT Deep Learning School

– Yandex Interface Development School: led frontend in a 24-person team (Next.js, OAuth)

Awards

1st place in national student competition (yandex.ru/profi) in quantum technologies

Publications

Defense against deepfake attacks via eye-movement liveness detection – Batmaev, Novikov // Information Security Issues, 2025

Dynamic eye-movement biometrics: trust with untrusted devices – Batmaev // MIPT Scientific Conference, 2025

Bayesian parameter estimation of symbiotic variable stars from light curves via probabilistic programming – Batmaev // MIPT Scientific Conference, 2024

Forest segmentation from satellite imagery via neural nets and mutual-information maximization – Matseyko, Batmaev et al. // IKI RAS Conference on Remote Sensing, 2023
